himanipilankar@gmail.com | LinkedIn: [himani-linkedin](#) | Github: [himanigithub](#) | [Certificates](#)

SKILLS

- ❖ Programming Languages: C, C++, Java, Python, Javascript
- ❖ Web Technologies: HTML, CSS, JavaScript, React
- ❖ Backend & Databases: Express.js, Node.js, MySQL, MongoDB, Supabase

EDUCATION

- ❖ **Sardar Patel Institute of Technology, Andheri, Mumbai** Sep 2024 -Jun 2027(Expected)
B.Tech in Computer Engineering CGPA 8.48
Minor: IIoT
- ❖ **K. J. Somaiya Polytechnic, Vidyavihar, Mumbai** Oct 2021-Jun 2024
Diploma in Computer Engineering Percentage: 97.1%
- ❖ **Swami Vivekanand Vidyamandir, Dombivali, Mumbai**
X-SSC board Percentage: 94.8%

PROJECTS

- ❖ **Waste2Worth | Full-Stack Donor-NGO Collaboration Platform**
Tech Stack: React, Node.js, Express.js, MongoDB, MongoDB Atlas
 - Developed a full-stack platform connecting donors with NGOs for efficient donation management.
 - Implemented JWT-based authentication with role-based access control for Donor, NGO, and Admin users.
 - Designed complete donation lifecycle workflows including claim, pickup, delivery, and proof uploads.
 - Built NGO verification system with admin approval and reporting features.
 - Added ratings, feedback, notifications, and dashboard analytics to improve transparency and trust.
 - Migrated database to MongoDB Atlas for cloud scalability, backup, and reliability.
- ❖ **InfraTrace | Construction Site Management App (Hackathon Project)**
Tech Stack: React Native, Expo, Node.js, MongoDB, Supabase
 - Built a role-based mobile application to digitize construction site operations such as attendance, task management, and material requests.
 - Implemented OTP authentication, profile onboarding, and site joining via unique enrollment codes.
 - Developed supervisor workflows for assigning tasks, tracking attendance, and approving material requests.
 - Created scalable backend APIs using Node.js and MongoDB.
 - Ensured responsive and consistent UI performance across both iOS and Android devices.
- ❖ **SafeRide AI | Driver Safety Monitoring System (Hackathon Project)**
Tech Stack: Python, OpenCV, MediaPipe, NumPy, ESP32
 - Developed a real-time driver monitoring system to prevent accidents caused by fatigue, distraction, or inattentiveness.
 - Implemented drowsiness detection using eye closure analysis and distraction detection using head pose estimation.
 - Built multi-state risk engine with NORMAL, WARNING, and CRITICAL alert levels.
 - Integrated ESP32 hardware for LED and buzzer alerts using serial communication.
 - Added emergency button trigger and fail-safe mechanism to auto-detect communication loss.
 - Designed for use in public transport, logistics fleets, ride-sharing, and commercial vehicles.

EXTRACURRICULAR ACTIVITIES

- ❖ Mentored 10 first-year students in their 1st semester, guiding them through academics, college transition.

ACHIEVEMENT

- ❖ Secured a position among the Top 60 teams in Quasar 4.0 and Top 48 teams in HackX 2.0.

EXPERIENCE

- ❖ **K.J. Somaiya Vocational Institute of Training** 12 Jun 2023- 23 Jul 2023
Hardware and maintenance internship
Completed a 6-week internship focused on PC hardware maintenance and troubleshooting. Performed system upgrades, OS installation, software setup, and resolved lab PC and network-related issues in coordination with senior technicians.
